GENDER IN FIGURES

Do social inequalities affect health?

Percentage of men and women from different social classes reporting poor or so-so health

Observatori iQ

Nadia Sanmartin

Living conditions and social inequality are factors affecting health, and also perceptions of health: the lower the social class, the poorer the reported state of health. In general, men have a better perception of their health than women.

The figures show that better off people not only have fewer health problems, but that they perceive fewer gender imbalances with regard to their physical and mental health. Health inequalities between men and women in the middle and lower classes are greater.

iQ is a cooperative that seeks to contribute to social innovation in favor of gender equality. The cooperative offers the iQ Observatory, a platform that delivers statistical data on the differences and inequalities between men and women in different areas of everyday life in Catalonia. iQ team is made up of professionals with several profiles and is led by the political scientist Maria de la Fuente.
